

## Homework Lection 2

### TODO

- ◆ Create a development package ZXXX\_DEV and insert into the main package given in the lection
- ◆ Create all the elements according to the personal development task but in your namespace, viz:
  - Domains
  - Data elements
  - DB tables
- ◆ Connect Text table to the main table via foreign key
- ◆ For the main table create 1 index for 1 field (how to create indexes - either find yourself in SE11 menu or ask SCN/Google). Please choose the field for indexing yourself but remember that this CAN'T be the KEY field!
- ◆ Create a couple of meaningful entries in your tables via transactions SE16 or SE16n (remember – table should have a “maintenance allowed” setting)
